

ASS_ARIS_Reporting

„YOU keep thinking about your business
WE provide the basis!“

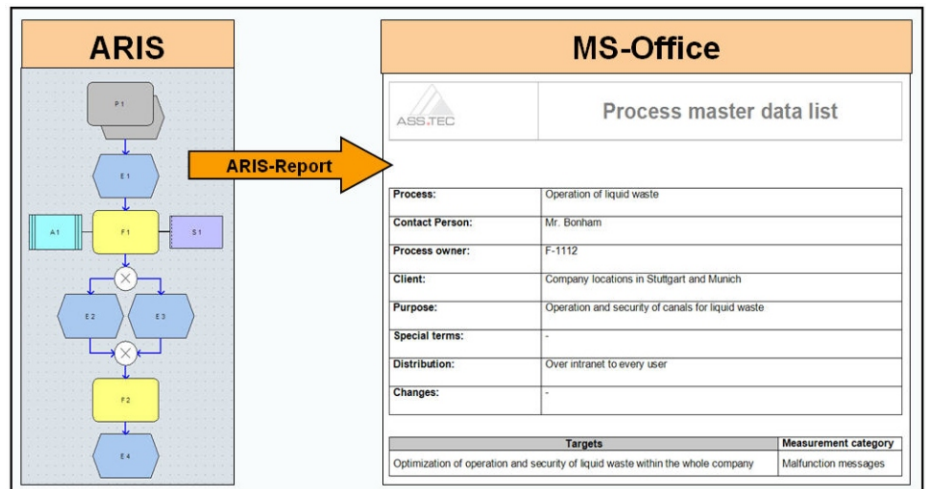

Situation and challenge

You have already created different process documentations within your enterprise with ARIS (for example EPCs, organizational charts, function trees, ...) and you want to generate additional value from your documentation beyond the provided standard reports or adapt the existing standard reports of ARIS. Use the ASS.TEC competence in the area of 'ARIS-Reporting' for your enterprise and generate additional value from your already existing process documentation and the information contained in it.

ARIS-Reporting:

ARIS-Reporting offers you the possibility to evaluate or change any content in your existing process documentation in different ways. Therefore a programming interface is included in ARIS. You can create your own report scripts or adapt the pre defined report scripts by using 'JavaScript' or 'VisualBasic' as programming language.

ASS_ARIS_Reporting

„YOU keep thinking about your business
WE provide the basis!“

Wide expertise within ASS.TEC:

ASS.TEC is able to support you with a wide expertise from different projects and also has some pre defined report components out of the box. By using the pre defined report components it is easy to fulfil your individual requirements fast, effective and cheap.

ASS.TEC services for your company:

- Adaption of the ARIS standard reports to your individual needs (for example adapt them to your corporate design,...)
- Creation of completely new reports based on your individual requirements
- Use of already available ASS.TEC pre defined report components for a fast, effective and cheap implementation of your individual requirements
- "1-click-reports" for the simple creation of complex office documents without manual postprocessing

Examples of realized ARIS-reports:

- Automated generation of process models
- Automated revision, formatting and modelling within process models
- Creation of management views from existing process documentations
- Business blueprint report for the selection and development of applications
- Creation of complete process manuals
- Creation of process master data lists
- Creation of process-/ organisation evaluations for capacity and training planning
- Creation of process interface overviews for general coordination within the company
- Creation of method and work instructions
- Creation of ISO conform revision history
- Report for user defined XML exports
- Report for user defined translation tables
- Quality checks for process models
- Synchronization of process models with SAP Solution Manager
